

## Statement 9

# THROMBOPHILIA

Evaluation of infertile women shouldn't include Thrombophilia testing.

Fertility of unknown etiology (UI) shouldn't be treated or investigated for thrombophilia's.

RPL— RIF may be associated with thrombophilia but not caused by it.

Recommendations for thrombophilia testing should only be performed when results will be used to improve or modify management.

Elevated costs of the Thrombophilia testing, with minimal potential benefit, leading to inappropriate use of anticoagulants with no evidence-based proven benefit.
