

Statement 6

GENETIC TESTING

- Establishing a decision on which PGT technique benefits the patient requires the study of the genetic disorder and discuss the complications if any.
- Further prenatal diagnosis post PGT should be encouraged, to confirm diagnosis.
- Risk of embryos not being diagnosed after PCT should be discussed and offer the possibility of transfer (in the case of PGT-A for RIF, RM, and SMF) or rebiopsy.
- Embryologists, clinicians, and Geneticists should be aware of guidelines and recommendations for PGT good practice

Dr.
Nehal Adel
